

# CAN WE PREDICT THE SUCCESS OF A MOVIE?

The

Team

# ANSWERING THE WHY

## Who is the YAY! Team?

Ally Qi  
Anastasia Valdes  
Grace Huefner  
Kellie Cox  
Masita Mohamad

## Where did the data come from?

We found a 5000-movie database on Kaggle that queries fields from The Movie Database (a site like IMDB)

Source: <https://www.kaggle.com/tmdb/tmdb-movie-metadata>

## What kinds of questions did we ask?

Can we predict the success of a movie based on:

Release date  
Runtime  
Geography  
Genre  
Title Length

## How did we measure success?

Vote Rating: the average rating that the movie received on the site  
Adjusted Revenue: revenue adjusted for inflation in 2020

# CLEANING AND EXPLORING THE DATA

Find the dataset of interest

Check data types

Check data sample size

Check counts for each variable

Remove unused variables

Check summary statistics

Check missing values

- Imputation for missing values
- Replaced with mean

Confirm no duplicates

Set unique identifier to "ID"

- Final sample size: 4800

Created a  
"decade"  
variable

Created a  
"release year"  
variable

Adjusted  
inflation for  
budget and  
revenue\*

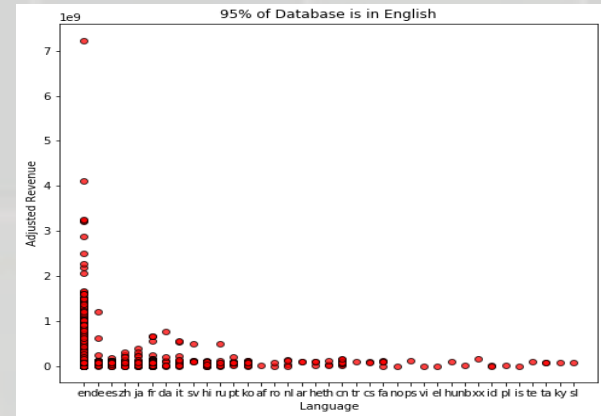

- Import cpi

Extract  
genres to its  
own column\*

Revenue: \$2.49B

Movie Genres: Drama, Horror,  
Thriller

3. Jaws

Revenue: \$2.2B

Movie Genres: Adventure,  
Horror, Thriller

4. The Godfather

Revenue: \$1.5B

Movie Genres: Crime, Drama

5. Close Encounters of the Third Kind

Revenue: \$1.25B

Movie Genres: Drama, Science Fiction

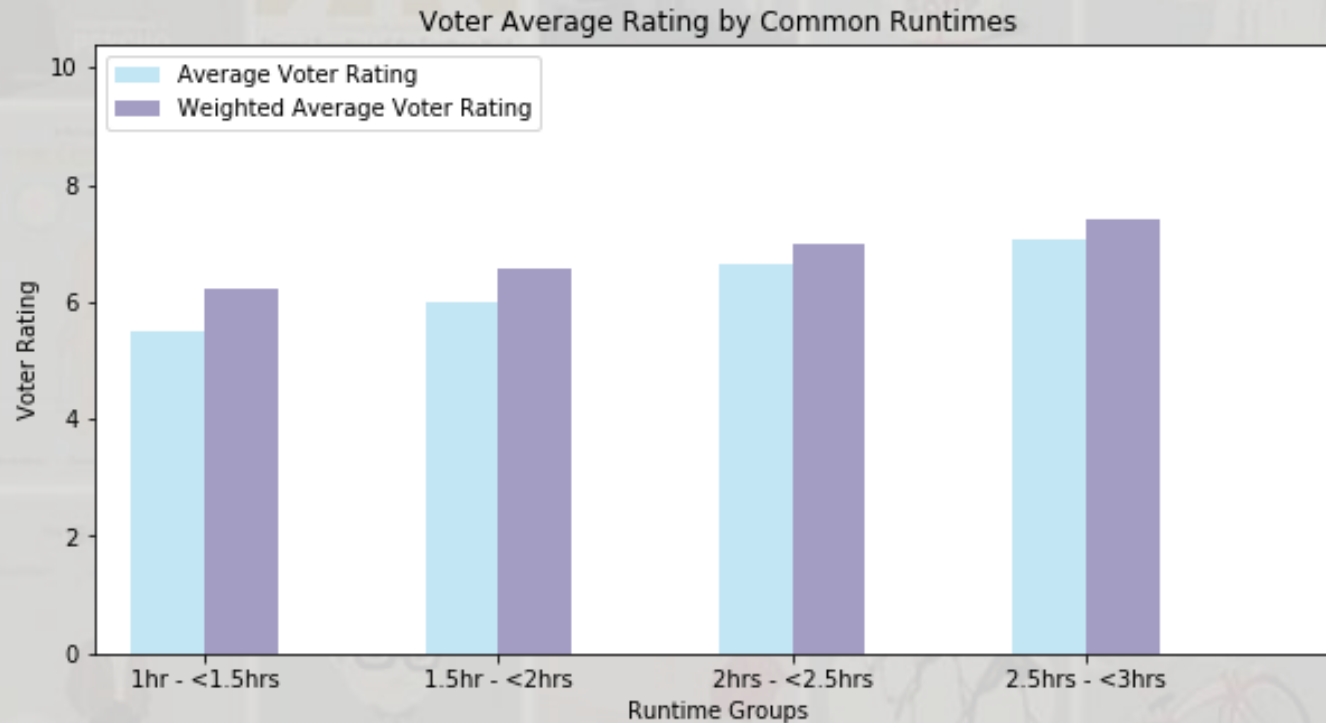

# AND SOME QUESTIONS MADE SENSE!

Success  
Measurement

Vote Average

Revenue

What is the relationship between Runtime and Vote Average?

- The average runtime of movies on the list was 108 minutes or 1hr 48 mins.
- Those movies between 1 hour and 3 hours received the most votes, and therefore were deemed the most common.

Measurement

Vote Average

Revenue

## What is the relationship between Production Budget and Vote Average?

- There is a **slight** positive relationship between production cost and viewers' ratings.
- Subgroup 1 (Action, Adventure, Fantasy & Science Fiction) is more expensive to produce possibly due to special sets, props, visual and special effects etc, however, this seems to not have much bearings on the viewers' votes

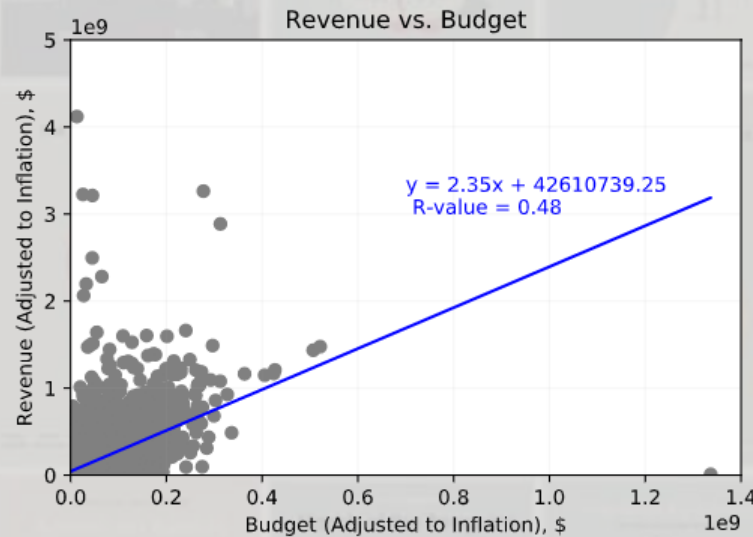

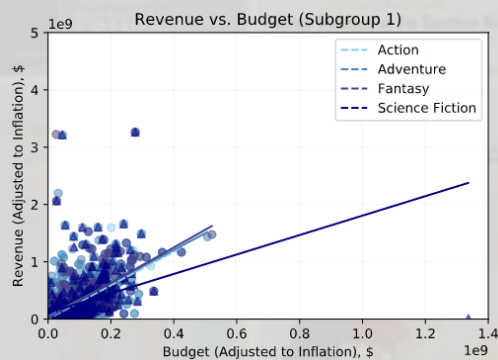

# AND SOME QUESTIONS MADE SENSE!

Measurement

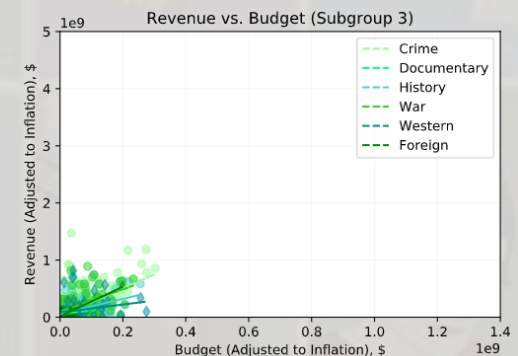

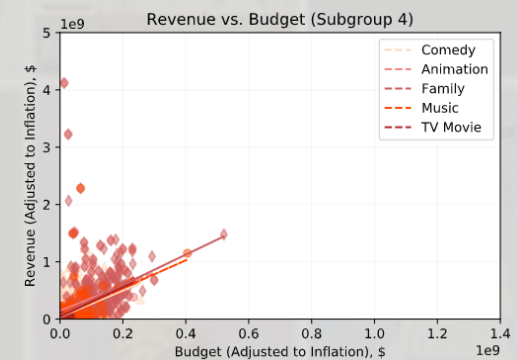

Vote  
Average

Revenue

## What is the relationship between Production Budget and Revenue?

- There is a strong relationship between production cost and production revenue
- Bigger film production budget seems to result in higher revenue
- Western movies produces the lowest Return of Investment

# SO... CAN WE PREDICT THE SUCCESS?

**Yes!**

By using very specific parameters set for this data we can.

**If you're going by  
vote average**

Make a drama or fact-based movie, that is between 1.5 – 2.5 hours long and has a budget above \$200 M.

**If you're going by  
box office revenue**

Make an action, adventure, or fantasy that is between 1.5 – 2.5 hours long and has a budget above \$200 M.

Ultimately, we found the data set was not ideal for what we were looking to answer. Sites like IMDB are likely to have more detailed results and findings that we could use to help support our hypothesis
